

American Academy of Pediatrics
DEDICATED TO THE HEALTH OF ALL CHILDREN™

”Children are not little adults and are disproportionately impacted by all environmental exposures, including cell phone radiation. Current FCC standards do not account for the unique vulnerability and use patterns specific to pregnant women and children.” **AAP letter to the FCC, 2013**

“Scientists continue to study the effects of long-term exposure to low levels of RF.”
EPA Webpage 8/20/14

“The International Agency for Research on Cancer (IARC) has classified RF radiation as a “possible human carcinogen.” (A carcinogen is an agent that causes cancer.) Scientists are continuing to study the possible health effects... looking into how cell phones may affect: Some types of tumors, Our eyes, Sleep, Memory, Headaches, Acoustic Neuroma.

National Institute of Environmental Health Sciences

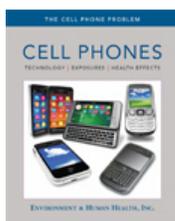

“Being exposed to some kinds of EMF may have some bad effects on humans, but scientists do not know for sure. Because of this, NIEHS recommends that people learn practical ways of reducing exposures to EMFs.” **National Institute of Environmental Health Sciences Webpage Pollute/EMF**

"The electromagnetic radiation standards used by the Federal Communications Commission (FCC) continue to be based on thermal heating, a criterion now nearly 30 years out of date and inapplicable today." - **The U.S. Department of Interior** in a [2014 Letter](#) stating that FCC RF guidelines are ‘not protective of wildlife’.

“There is consensus that additional research is warranted to address gaps in knowledge, such as the effects of cell phone use over the long-term and on pediatric populations. The World Health Organization's International Agency for Research on Cancer Classified Radiofrequency Fields as Possibly Carcinogenic to Humans.” **FDA**

“The scientific evidence is sufficiently robust showing that cellular devices pose significant health risks to children and pregnant women. The weight of the evidence supports stronger precautionary regulation by the federal government. The cellular industry should take immediate steps to reduce emission of electromagnetic radiation (EMR) from phones and avoid marketing their products to children.” **John Wargo, Ph.D., professor of Environmental Risk and Policy at Yale University** and lead author of the EHHI Report authored by several Yale Doctors and environmental experts.

“Take all reasonable measures” to reduce exposure to electromagnetic fields “particularly the exposure to children and young people who seem to be most at risk from head tumours.” **The Parliamentary Assembly of the Council of Europe’s 2011 Resolution 1815**

“As a research scientist and physician who studies how microwave radiation affects the outcomes of pregnancy, I am deeply concerned about growing exposures to cell phone and other wireless radiation.” - **Dr. Hugh Taylor, Chief of Obstetrics at Yale, BabySafeProject.org**
