

# 5G IS COMING!!!

*Amazingly fast broadband and mobile are nearly here! Are you ready for it?*

**Here's what you really need to know:**

- *Commercial insurers won't touch telecom companies involved with 5G (or any of its predecessors) due to serious health problems associated with radiation given off by wireless devices and mobile phones.*
- *These health risks include: reduced ability to concentrate, dizziness, disturbed sleep, depression, skin rashes, blood disorders, immune-system problems, reduced sperm counts, miscarried pregnancies, eye cataracts, diabetes, cancers and numerous other diseases – many of them fatal.*
- *It's even admitted 5G has never been safety tested!*

**"We should not ignore ... the enlarging body of science that points to real threats to public health and, especially, our children's safety and well-being."** - Dr. Cindy Russell, Vice President of Environmental Health, Santa Clara Medical Association.
